

Estimated Noise Levels in Library Areas

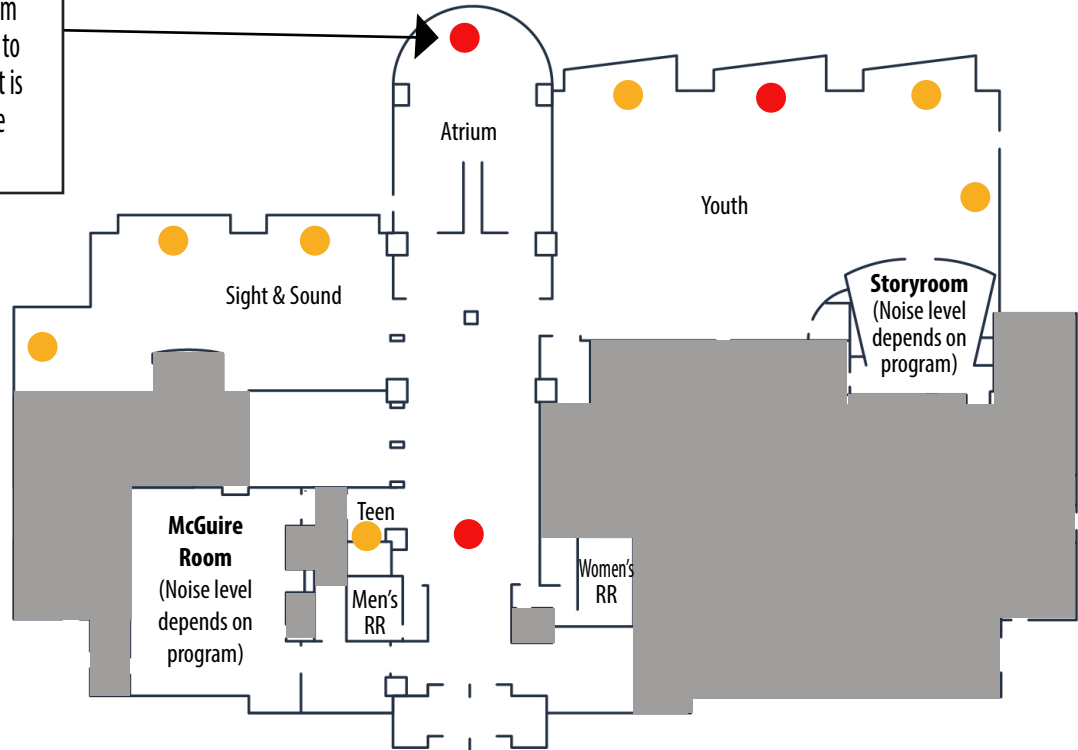

TRAVERSE AREA
DISTRICT
LIBRARY

FIRST FLOOR

Due to the nature of its design the atrium amplifies noise. Users should be advised that noise/conversation from the atrium does carry (very clearly) to the upstairs floor of the library. That is why areas around the atrium on the second floor are also coded in red.

- Loudest Noise Level
- Medium Noise Level
- Lowest Noise Level

Please note: As a public library we are a community space, and not as quiet as one might expect from an academic or law library. However, we do have dedicated quiet areas on the second floor. This chart is a guide to other areas of the library. If you are seeking the quietest space available you will find it in the green areas.

Sensory kits are available for use inside the library. You may request one at the front desk or at any service desk. Thank you!

SECOND FLOOR
